

MC Note Module

Combinable with OptiCoin or MSS series

The MC Note Module is an optional additional device for the OptiCoin or rather for the MSS series which makes the parallel deposit of coins and banknotes possible. It can be used in combination with all OptiCoin and MSS devices equipped with a touch TFT. Two different banknote-acceptors for single note- and alternatively with bundle-note-feeder for smaller banknote bundles are available. The combination of coin- and note-deposit builds the perfect solution for sectors like public transport, vending, parcel-services and other retailers.
